

ENVIRONMENTAL MONITORING SUMMARY – JUNE 2020

1. SAND PUMPING & DREDGING

59,634 m3 was pumped to Snapper Rocks East.

• 0 m3 of sand was dredged.

Sand Delivery June 2020

Pumped: 59,634 m³

Dredged: 0 m³

Total: 59,634 m³

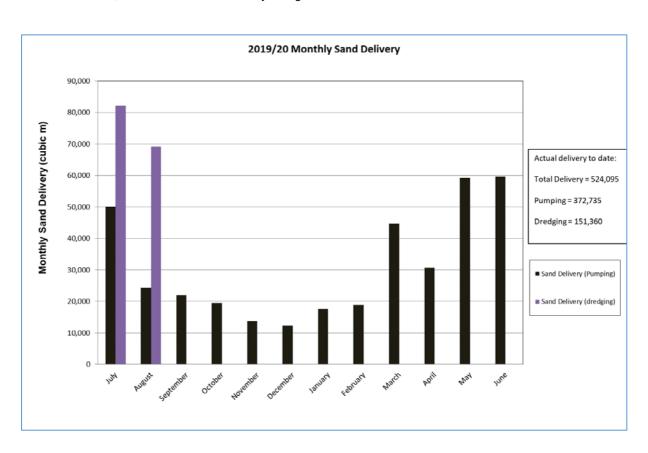

The number of days sand was pumped this month = 22

Stage II Sand Delivery May 2000 to June 2020

Pumped: 9,880,261 m³ Dredged: 2,471,875 m³ *

Total: 12,352,136 m³ *

^{*} This Includes 22,870 m³ of sand delivered by dredge to Palm Beach between November and November 2005

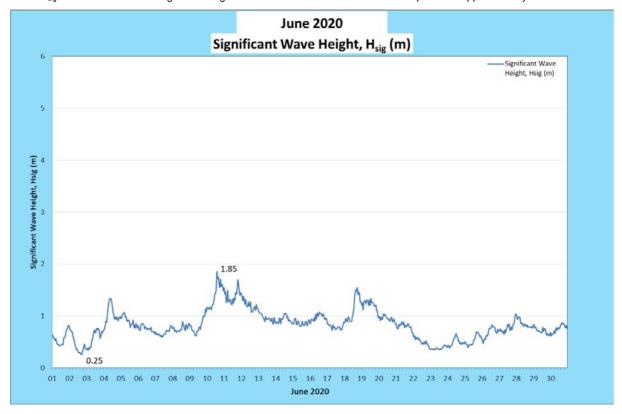

2. WAVE CONDITIONS

Significant wave heights (H_{sig}) ranged mostly from calm to moderate (0.25 m to 1.85 m), with the peak H_{sig} occurring on the 10th of June 2020. Wave directions were predominantly from the ESE.

- Minimum H_{siq}: 0.25 m on the 2nd of June 2020
- Maximum H_{sig}: 1.85 m on the 10th of June 2020
- Number of days where H_{sig} < 1 m at some point: 27
- Number of days where $H_{sig} > 2$ m at some point: 0

Note: H_{sig} is defined as the average of the highest one-third of waves recorded over a period of approximately 30 minutes

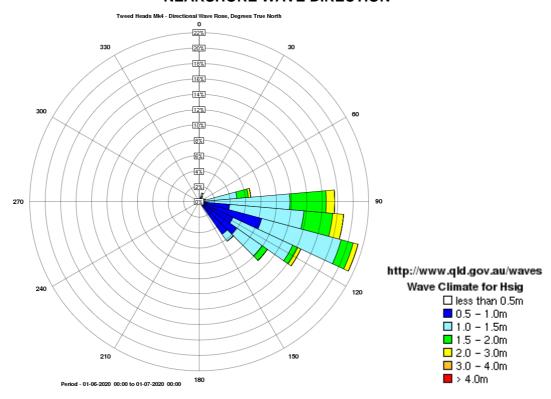

(Source: Tweed Heads Waverider buoy; Queensland Government)

In January 2020 TSB commissioned the deployment of another Waverider buoy in the Tweed region. Tweed Offshore Waverider buoy was deployed in approximately 60 m water depth to the east and adjacent to Kingscliff and Dreamtime Beaches. The purpose of the Tweed Offshore buoy is to observe and assess changes in wave climate at the Tweed Heads buoy due to the presence of the Danger Reefs and Cook Island.

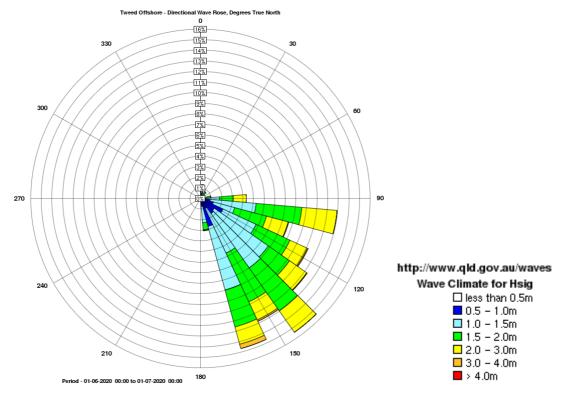

A link to data recorded by the Tweed Heads and Tweed Offshore Waverider buoys is available at: http://www.qld.gov.au/waves

3. INDICATIVE LONGSHORE TRANSPORT

The first graph below is based on simplified sediment transport modelling and is indicative only. The second graph indicates the wave direction in relation to the shoreline null direction.

In June 2020 the estimated natural sand transport moving north towards the Tweed River entrance was calculated to be in the order of 48,000 m³. This result is 78% of the average estimated sand transport quantity of approximately 62,000 m³ for the month of June.

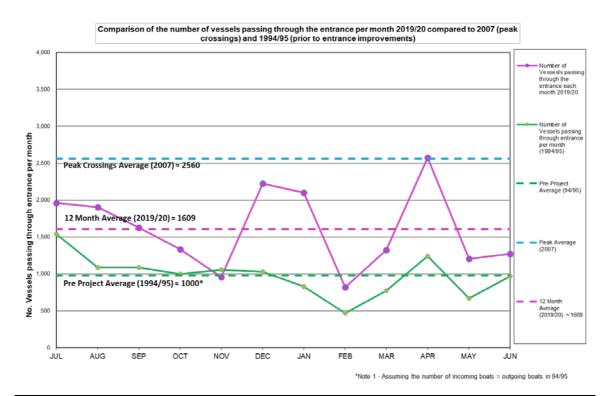

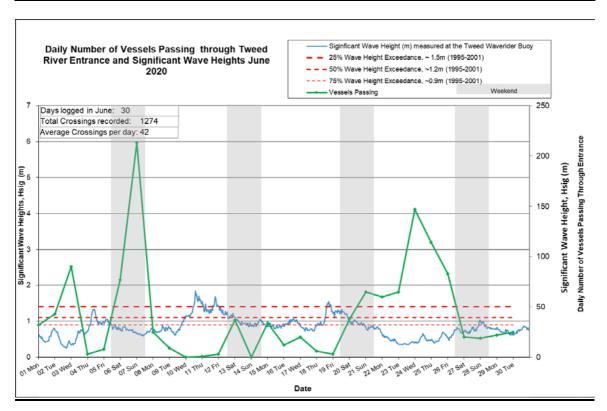

4. TWEED RIVER ENTRANCE USAGE

A total of 1,274 Tweed River entrance vessel crossings were recorded for the month (106% of the June average (2002 – 2019)).
